

# T4P All-Site Meeting

20 February 2023  
Summary

---

## Screening Log Reminders

- Patients should be entered onto the screening log once their platelet count is below 50 and continue to be screened daily until screening is completed (patient recruited, excluded, or discharged)
- If their platelet count drops below 50 during screening this inclusion criteria remains 'yes' as this was the case at the start of screening
- The optional screening tool can be used to track patients before they are put onto the screening log
- Please complete the screening outcome drop down if possible, and while this can be 'screening ongoing' – it should be updated to one of the other outcomes following patient discharge
- If you select 'no procedure planned' then the screening outcome is automatically 'not randomised – did not meet all inclusion criteria', regardless of whether they also met any exclusions

## Screening Log Scenarios

- We have seen a high amount of 'no procedure planned' so we are interested in knowing why this is and whether it is because patients are having procedures in the theatre, ward, or ED before coming to critical care. Some useful comments came up on why this option has been selected:
  - Patients platelet count is above 50 on admission to critical care when most of the procedures are done, platelet count then drops below 50 during admission and no procedures are required
  - Procedures carried out in theatre, patient is then in critical care for 24 hours with no procedure required
- Important that we still catch these patients if possible and randomise them while they are having that procedure, as long as you know they are planned for admission into critical care

## Screening Log Update

- V2.1 of the screening log will be circulated next week in time to be used for the next screening log request
- This will include additional details on dates of screening and information on pre-critical care procedures
- SOP003 Patient Screening in section 3 of your ISF will also be updated to reflect these changes and will go through every scenario of how to complete the screening log if you have any questions

## MACRO Critical Issues Slides:

- Please find the slides [here](#) which go through the rare scenarios when re-saving data on MACRO that have been flagged to us.
- If you have any issues please do get in touch with us or our data management team who can assist you [data.management@icnarc.org](mailto:data.management@icnarc.org)

**Thank you for your continued hard work on the trial!**
